LOGGER SCALE SYSTEMS

VULCAN was the first on-board scale system to incorporate a complete 12-volt, 2-wire electronic system. VULCAN electronics have proven to be reliable in even the harshest environments. The 2-wire cabling is easy to repair and inexpensive to replace if damaged. Maintenance time and cost are greatly reduced compared with 4-wire systems.

The VULCAN meter is easy to use, with simple push button adjustments to operate the entire system. It is also equipped with system self-diagnostics to simplify troubleshooting should a problem occur.

The patented VULCAN double-ended shear beam load cells provide superior accuracy and reliability. Their accuracy and light weight, combined with high strength, mean increased payloads.

V300 SERIES METER

DESCRIPTION:

The Vulcan V300 Series meters display individual axle group weights (up to four channels) and the total weight. The meter display can be fixed on any single channel, group of channels, or automatically cycled through all active channels. Cycle times are user adjustable from 1 to 9 seconds. Diagnostic menu selections and an extensive set of help codes assists the user to quickly and easily identify and correct a problem if it occurs. New capabilities allow the meter to diagnose a problem with an individual load cell.

The V300 Series meter uses the new Vulcan Single Line (VSL) technology to minimize truck and trailer wiring for the best reliability. A V300 Series meter can immediately identify and read the weight from any other VSL equipped truck or trailer.

SPECIFICATION:

DISPLAY: LED, variable brightness
0.6" high characters

CYCLE SPEED: Variable, 1-9 seconds

SIZE: 8.0" W x 1.25" D x 3.5" H (including mounting bracket)

RESOLUTION: 10, 20, 50, 100 or 200 lb or kg increments

VOLTAGE REQUIRED: 12 Vdc (10.5 to 15 Vdc)

CURRENT DRAW: Less than 1 amp

PROTECTION: Inline, 1 amp fast acting fuses and reverse voltage protection

WEIGHT: Less than 12 oz (including mounting bracket)

VSL VULCODER

DESCRIPTION:

The VSL Vulcoder receives the analog voltage signal from the load cells or pressure sensors. A microprocessor inside the Vulcoder then calculates the weight based on the calibration values stored in its memory. When the meter requests weight from a channel, the proper Vulcoder will respond and send the weight information back to the meter. All VSL Vulcoders connect to the same two wire line. Any VSL equipped trailer can be plugged into any truck with a V300 Series meter and be immediately identified and read properly.

SPECIFICATION:

SIZE: 5.0" L x 2.5" W x 1.5" H (one and two lead vulcoders)

2-WIRE COMMUNICATION CABLE:

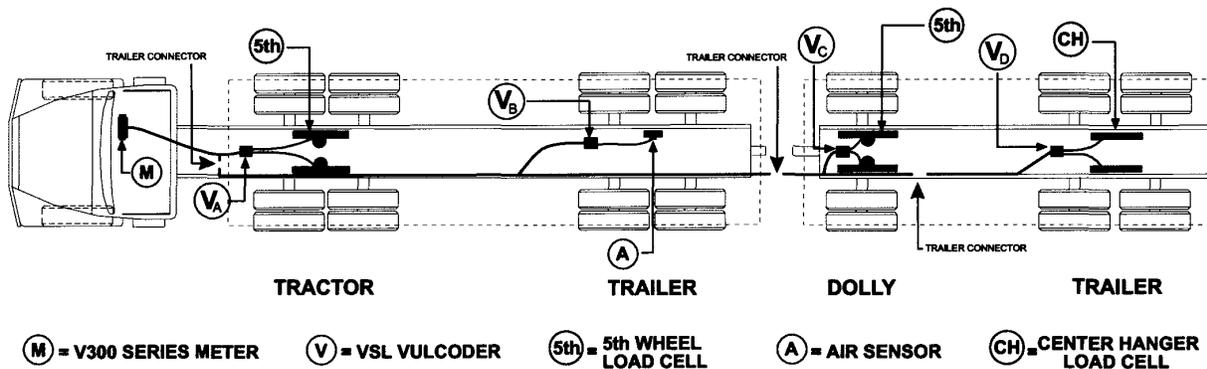

Vulcan designed special cable, urethane jacketed, remains flexible in cold weather,

4-WIRE SENSOR CABLE:

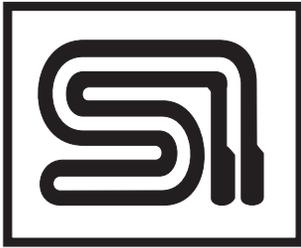

Vulcan designed special shielded cable, polyurethane jacketed, 4-conductor

ELECTRONICS: Environmentally sealed

* Note: Standard Series 1000 bearings furnished without mounting holes. For bearings complete with mounting holes, add suffix "Z" to model number. Example: Model M4-12P4 complete with mounting holes becomes Model M4-12P4Z. There are 4 fittings, approximately equally spaced, that press-fit into a 1/4-inch diameter hole.

Bushing Replacement: 434 (Rubber) or 434B (Poly)
Outside Diameter: 4 1/4 in. (108 mm)
Length: 5 in. (127 mm)

IMPORTANT GUIDELINES that apply to all Premier Hinge Assemblies

- Never attempt weld repair of damaged or worn hinge components
- Clean and inspect hinge assemblies for damage or excessive wear before each and every use
- All weld attachments should be performed by a certified welder skilled in structural welding
- The mounting structure the hinges are welded to must be of sufficient strength to withstand load ratings of hinges
- Do not bind-up (jackknife) any application as stresses can cause damage to products or components, resulting in failure and detachment of the trailer while in use

IMPORTANT GUIDELINES that apply to all Premier Bolt-On Drawbar Eyes

- Never attempt weld repair of damaged or worn drawbar eyes
- Air adjusted drawbar eyes must be used with an air service chamber or #500 slack adjuster
- Only Grade-8 fasteners properly torqued should be used when attaching bolt-on drawbar eyes
- Do not apply lubricants to the drawbar eye loop
- Clean and inspect drawbar eyes and eye assemblies for damage or excessive wear frequently
- Structure to which eye is attached must be of sufficient strength to withstand load rating of eye
- Do not bind-up (Jackknife) any application as stresses can cause damage to products or components, resulting in failure and detachment of the trailer while in use

IMPORTANT GUIDELINES that apply to all Premier Swivel Drawbar Eyes

- Never attempt weld repair of damaged or worn drawbar eyes
- Never attempt to use a swivel-type drawbar eye with a swivel-type coupling
- Air adjusted drawbar eyes must be used with an air service chamber or #500 slack adjuster
- Do not apply lubricants to the drawbar eye loop
- Clean and inspect drawbar eyes and eye assemblies for damage or excessive wear before

- each and every use
- Assembly to which eye is attached must be of sufficient strength to withstand load rating of eye
- Do not bind-up (Jackknife) any application as stresses can cause damage to products or components, resulting in failure and detachment of the trailer while in use
